

Risk Management Assessment Program

OPTIMIZING REVENUE. REDUCING COSTS. MANAGING RISKS.

Securing the infrastructure that supports all of your business processes has become a critical issue for organizations today. Your environmental and security controls are driven by compliance requirements, contractual agreements, the need to demonstrate duty of care to your customers and partners and the need to mitigate your risks. At The AME Group, we can provide you with an unbiased Risk Management Assessment based on your specific requirements.

To develop your security strategy, we first gain an in-depth understanding of your security requirements through interviews with your key business and technical personnel as well as reviewing your current security policies. The AME Group will then make recommendations based on our security best practices and methodologies.

The AME Group's Risk Management Assessment will provide you with guidance on how to:

- Secure Your Company's Assets - How to gain a competitive advantage through a superior infrastructure and protect your company's vital corporate information assets from unauthorized access
- Maximize Your Investments - Security Management for your infrastructure through guidance and best practices
- Develop Best Practices - Reduce your risk of security vulnerabilities by utilizing integrated solutions that are designed utilizing proven methodologies and best practices

The AME Group will provide you with a formalized security strategy that includes:

- Review of your existing security profile
- An outline of areas at the greatest risk
- Suggestions for improving your security and reducing your vulnerabilities
- Recommendations for security best practices deemed to be appropriate based on potential exposures in your environment
- A list of steps needed to implement these technologies to allow your company to move forward
